HAVE YOU MET **ARI**?

OUR **A**PPAREL **R**FIG **I**NVENTORY SYSTEM

ARI uses Radio Frequency Identification versus hand counting to track garments, reduce shortages and ensure complete, on-time delivery!

Other garment tracking systems require hand counting, dependent on human proficiency and line of sight reading to ensure accuracy. ARI makes it simple, reading garment information from a RFID chip embedded in the garment, even if it's soiled or bundles with other garments.

THE BENEFITS OF ARI

Controls Garment Loss Charges

With this cutting-edge technology we can tell you when and where every garment has been - from soil pick-up to delivery. Employees are accountable for lost or misplaced items.

Delivers On-Time & Reduces Shortages

Precise tracking ends garment delivery inaccuracies. At Century Linen, we know exactly what should be returned. If we misplace it, we replace it.

Provides Business Intelligence

To help you control your apparel program, ARI can provide reports useful to your business - inventory, service, employee usage and abuse, cleaning and replacement history, and more!

EXCLUSIVE TO CENTURY LINEN

ARI delivers image.
Century Linen delivers
cleanliness!
